DOLPHY AUSTRALIA CARE & MAINTENANCE GUIDE: STAINLESS STEEL PRODUCTS

Warning: Before starting any cleaning routine, always disconnect any electrical cables.

- **Regular Cleaning:** Dolphy stainless steel products achieve their best appearance when cleaned regularly with a clean, damp cloth.
- **Dry Thoroughly:** Always dry the surface afterward to avoid streak marks.
- **Prevent Stubborn Stains:** Consistent routine cleaning helps prevent the buildup of stubborn stains and ensures the best possible finish.

Stainless Steel Care and Maintenance Instructions

Routine Cleaning

- For daily upkeep, gently wipe the surface with a damp, soft cloth or sponge.
- Alternatively, you can clean with a mixture of warm water and a mild, neutral pH soap or detergent (pH 8 to about 12 will be compatible, however corrosion may start when using very alkaline solutions of pH 13 to 14.)
- Always ensure to dry the surface afterward using a soft, absorbent cloth to prevent water spots and streaks.

Preventing Scratches

- Handle with care, as stainless-steel surfaces can be easily scratched by rough treatment or abrasive scrubbing.
- Avoid dragging any rough objects across the surface and be cautious of dirt or grit that might be trapped under other items, as it can lead to scratches.

Protecting Against Chemical Damage

- Prolonged exposure to salts or acids can damage the integrity of Dolphy Australia stainless steel products.
- Regular cleaning and maintenance routines are essential to reduce the risk of chemical reactions.
- Please note that using unsuitable cleaning products may harm your stainless-steel product and could invalidate the warranty.

Avoid These Practices:

- **Using steel wool or metal tools** on the surface, as they can cause scratches.
- **Cleaning with scourers or cloths** that have previously been used on other steel surfaces.
- **Applying concentrated bleach** or cleaning products containing sulfuric acid, hydrofluoric acid, chromic acid, nitric acid, acetic acid, and hydrochloric acid.
